

Dear Representative Castellano,

I am writing on behalf of 3Degrees Group, Inc. to express strong support for a Clean Transportation Fuels Standard (CTFS) in New Mexico.

3Degrees is a certified B Corporation with deep expertise in greenhouse gas accounting, environmental markets, carbon project development, transportation decarbonization solutions, and utility renewable energy programs. 3Degrees serves hundreds of corporate and institutional customers who voluntarily purchase hundreds of thousands of megawatt-hours (MWh) of renewable electricity products annually from generators across the globe.

We also support clean technology companies in maximizing the decarbonization impact of their products and helping meet government decarbonization and clean technology mandates. This includes working with renewable energy generators to support states in achieving renewable portfolio standards (RPS). We are also active in clean fuels standard programs in multiple jurisdictions and work with organizations to leverage these programs to enable transportation decarbonization. Specifically, 3Degrees is one of the largest participants in California's Low Carbon Fuel Standard by registered fuel supply equipment and we are pioneering new vehicle-fuel applications in Oregon.

A CTFS will reduce greenhouse gas emissions to mitigate climate change and the resulting droughts, wildfires, and other catastrophic effects in New Mexico. Clean transportation fuels standards are proven to also: reduce air pollution, decrease pollution-related health costs, narrow the persistent inequity in pollution exposures and health effects, create high-paying jobs, catalyze new investments and broad benefits to state economies, and even offer cheaper fueling options for drivers when crude oil price spikes drive up gasoline prices.

This important program can invigorate and diversify New Mexico's energy economy, improve air quality and respiratory health, combat climate change, and establish New Mexico as a leader in the national transition to clean fuels.

Sincerely,

/s/ Dave Meyer

Dave Meyer
Director, Transportation Markets
